Center of Excellence & Academia in MongoDB – Data Analytics

Our institution has established a Center of Excellence & Academia in MongoDB – Data Analytics to equip students with the latest skills in database technologies, big data management, and data-driven decision-making. This center acts as a hub for learning, research, and industry collaboration in modern data analytics.

Objectives:

Provide hands-on training in MongoDB for data storage, retrieval, and management.

Build strong competencies in data analytics, visualization, and business intelligence.

Encourage students to work on real-time projects and case studies using big data tools.

Facilitate certifications, internships, and workshops through industry-academic collaboration.

Promote research and innovation in the fields of NoSQL databases and data science.

Outcomes:

Students gain industry-ready skills in data analytics and MongoDB.

Enhanced opportunities for placements in data science and IT sectors.

Exposure to cutting-edge database technologies.

Development of a future-ready workforce in the data-driven world.
